

Who we are

WorkCast is an internationally recognised, award winning online event and presentation platform. The WorkCast platform delivers highly interactive and branded webinars, webcasting, virtual events and e-learning solutions for global companies such as Sony, Serco, Unilever, Ford, ebay, ee and global publishers including Reed Elsevier, UBM, John Wiley & Sons, Incisive Media.

We also work with international Associations, Universities as well as Government Departments and Charities.

Founded in 2008, WorkCast has developed a robust, powerful 'next generation' online event platform that continues to innovate and stay at the forefront of the market.

WorkCast is part of the Leighton Group which has a long and successful history in the technology, software, new media and interactive communication industries. The group has established itself as a breeding ground for the development of innovative, high growth ventures and is currently made up of a number of independent companies.

Job Title

Software Engineer C# .NET

Reporting to

Development Manager

Immediate Subordinates

None

Responsibilities

Programming primarily in C# .NET and MS SQL Server 2008, the successful candidate will work on a range of development projects to add new feature functionality to the core platform and on specific client implementation projects. The successful candidate will be highly motivated, professional and must work well under pressure in a small team.

The Person

The successful candidate will have experience working with similar technologies and will demonstrate an ability to contribute to a development team and a business's growth. As a small, rapidly growing organisation, all members of the team are expected to contribute to the overall success of the team in many ways and to get involved in all aspects of meeting the business and customer expectations. This may include periodically being 'on call' for our Production organisation to escalate technical issues to you.

Requirements

- Substantial development experience in C#, .Net and MS SQL Server
- WCF or Web Services more generally
- Working using secure coding standards
- HTML/CSS/XML/JavaScript/JQuery/Ajax/Flash

- Media Encoding and Streaming would be beneficial
- n-Tier development
- CDNs or Video experience generally would be beneficial
- Browser Compatibility issues

What we offer

To attract exceptional people we offer an excellent package. You can look forward to a competitive salary, pension scheme, life assurance and 25 days holiday (plus bank holidays).
